

Grades K-3 Abstract Template

Kids have several different things in
their lives that might scare them.
They also often get sick. We wanted
to create a technology that would help kids
with both.

Grades K-3 Present Technology Section Template

stuffed animals come in every size, color and animal. They are soft and filled with cotton, polyester blend or beads. Often kids go to the doctor and they get their temperature taken and maybe a throat or nose swab. This helps the doctors find out what is wrong with them. When children get sick they might have a fever, rash, stuffy nose, cough or congestion. Physical symptoms of fear sweating, trembling, and tightness in chest of a dry mouth.

Grades K-3 History Section Template

In 1892, Ithaca Kitty was first
stuffed animal made in a factory
that made thousands of the same
animals. Before that in 1880, a
company in Germany made a lot
of the same animal.

Grades K-3 Future Technology Template - 1

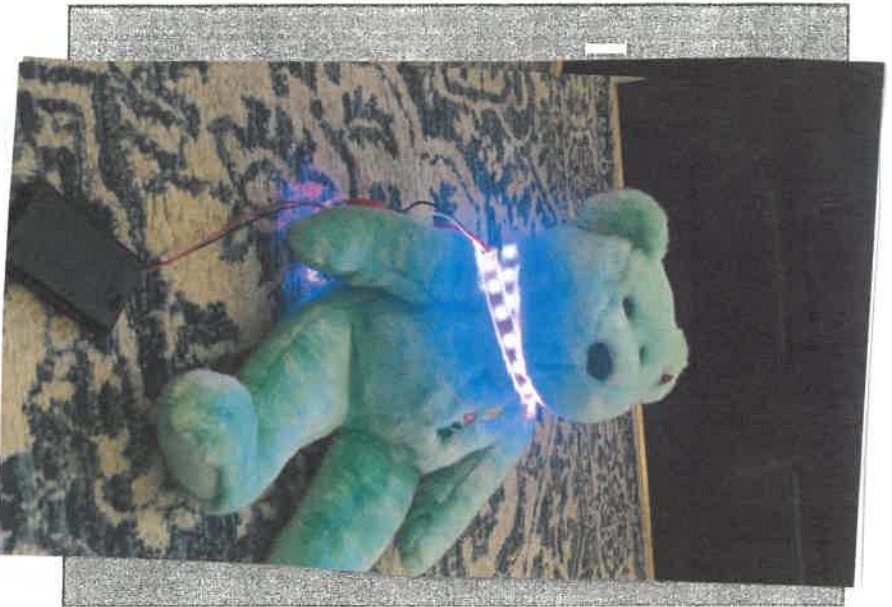

Our staffed animal for the future will do several things. The first is it will do is. monitor the child's heart rate and temperature. It will also monitor breathing and other things. If a child gets scared or sick the staffed animal will make any changes to comfort the child. If the

Grades K-3 Future Technology Template – 2 (optional)

child is scared of the dark
the stuffed animal will glow too
give lights If they are sick
it will notify + parents so
they can come take care of
the kid. Kids or parents can change
the stuffed animal to be exactly
what they want. They can change
the animal the color + the size

Grades K-3 Future Technology Template – 3 (optional)

even what the animal needs to
monitor, this way if you have a
kid wous super scard of something
you can have the animal sense that
can help the kid when they get
scard you can even add voices to
the animal so it can talk to
the kid in the parts voice.

Grades K-3 Breakthroughs Template - 1

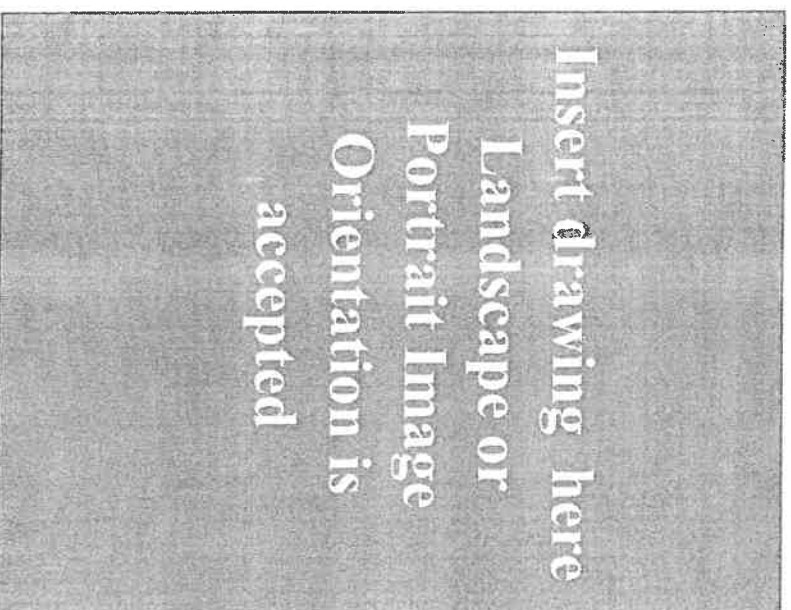

We would go to the hospital
and test a kid. I think
the kid will be scared and sick
so the bear will get to sense
both things.

Grades K-3 Breakthroughs Template – 2 (optional)

We will test it on lots of
different kids. Some kids we
would make sure they had a
good doctor to follow us and
and make sure the kid were
ok.

Grades K-3 Design Process Template – 1

At first our teddy bears only sensed fear, but then we added sick. Then we decided to make it customizable, so kids could get exactly what they wanted. Then we added the blood pressure and the temperature monitor these are these are the changes we made to our idea

Grades K-3 Consequences Template

The positive consequences are that kids won't be alone when they are afraid of sick because the animal will be with them. Also the parent will know if their child is sick in the middle of the night. The best one is that kids will be happy.

Negative consequences are that parents might not check on their kids because they know the bear is taking care of them. Also if the parents lose sleep if the alarm goes off all the time.
